Rotate Array

Given an integer array nums, rotate the array to the right by k steps, where k is non-negative.

Example:

Input: nums = [1,2,3,4,5,6,7], k = 3

Output: [5,6,7,1,2,3,4]

Two Sum

Given an array of integers nums and an integer target, return indices of the two numbers such that they add up to target.

Example:

Input: nums = [2,7,11,15], target = 9

Output: [0,1]
