Remove Duplicates from Sorted Array

Given a sorted array nums, remove duplicates in-place such that each element appears only once.

Example:

Input: nums = [1,1,2]

Output: [1,2]

Find All Numbers Disappeared in an Array

Given an array nums of n integers where 1 ? nums[i] ? n, return all the numbers that do not appear in this array.

Example:

Input: nums = [4,3,2,7,8,2,3,1]

Output: [5,6]
